Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:

☐ the entire international application

☒ claims Nos. 53 - 58

because:

☒ the said international application, or the said claims Nos. 53 - 58

relate to the following subject matter which does not require an international preliminary examination (*specify*):

See PCT Rule 67.1.(iv).: Methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods.

☐ the description, claims or drawings (*indicate particular elements below*) or said claims Nos. _____ are so unclear that no meaningful opinion could be formed (*specify*):

☐ the claims, or said claims Nos. _____ are so inadequately supported by the description that no meaningful opinion could be formed (*specify*):

☐ no international search report has been established for said claims Nos. _____

☐ a meaningful opinion could not be formed without the sequence listing; the applicant did not, within the prescribed time limit:

☐ furnish a sequence listing on paper complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Preliminary Examining Authority in a form and manner acceptable to it.

☐ furnish a sequence listing in electronic form complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Preliminary Examining Authority in a form and manner acceptable to it.

2. Citations and explanations (Rule 70.7)

Cited documents of particular relevance:

D1: US 6248110 B1

D2: EP 1132061 A2

D1 shows a device for providing spongy bone with bone substitute, according to claim 1, with a perforating device (76, figure 5H) for making a hole in the spongy bone and with a flushing device (column 9, lines 4-7) for flushing the hole. A vacuum source (86) is provided for generating a vacuum in the hole for sucking and facilitation insertion of the bone substitute (96) into said spongy bone. D2 also shows a device according to claim 1 (see figures 2 and 6).

The device according to claim 1 therefore is known from D1 and D2. Consequently, the invention defined in claim 1 lacks novelty and inventive step.

The arrangements according to claims 4, 2-15, 23-24, 34-36, 44-47 and 51-52 are also previous known from D1 or D2. Consequently, claims 4, 12-15, 23-24, 34-36, 44-47 and 51-52 also lack novelty and inventive step.

The device and material according to claims 2-3, 5-11, 16-22, 25-33, 37-43 and 48-50 are, however, clearly distinguishable from known technique. Consequently, the invention according to claims 2-3, 5-11, 16-22, 25-33, 37-43 and 48-50 is considered novel and not obvious to a person skilled in the art.

The invention is considered to be industrially applicable.
